## Technical Product Information

### Pump/Motor Mounts

#### Vertical Mount Gasket Part Number M182AVG-N

**M182 Vertical Mounting Option A** utilizes the Standard Aluminum Horizontal Pump/Motor Mount installed through an opening in the Reservoir Top and a gasket to seal the interface. This Gasket (part number M182AVG-N) is approximately 1/4" thicker than the previous cork gasket supplied. It has been determined that the standard bolts supplied with the Horizontal 182 Mounts are not long enough after passing through the Reservoir Top and this Gasket to allow adequate engagement into the Electric Motor and the bolts of the required length are too long for the horizontal mounting assembly.

**CORRECTIVE ACTION:** When the M182AVG-N gasket is ordered, it will include a bolt kit with longer bolts to accommodate the added thickness of this gasket.
